

## Lesson 1: Resource 5

# Mushroom Growth Monitor

After you have placed the peat moss on the compost, 4-5 days later you will see the mushrooms start to 'pin'. Use this chart to record the mushroom growth.

Imagine the grid below is the mushroom kit. Draw a circle in the proportion of the mushroom, where the mushroom is growing. This is a great way to document the daily growth of the mushrooms, record when you have harvested the mushrooms and predict where new mushrooms will appear.

**Remember!** You will need to make sure your mushroom have plenty of water on Friday afternoon, before you for the weekend. Mushrooms use LOTS of water!

From your team, choose someone to MONITOR and someone to HARVEST
